PROFESSIONAL SUMMARY

Junior Data Scientist with 3+ years of experience through academic projects and freelance work, applying machine learning, statistics, and programming to solve real-world problems. Skilled in Python, data analysis, and AI tools, with a passion for building intelligent systems and exploring innovative tech solutions.

EDUCATION

Ram Dayalu Singh College

Bachelor of Computer Applications

Present

SKILLS

Technical Skills: Matplotlib, NumPy, pandas, Scikit-learn, Python, Seaborn

Soft Skills: Time Management, Attention to Detail, Teamwork, Problem Solving

EXPERIENCE

Self-Initiated / Freelance | *Freelance Data Scientist*

Jan 2022 - Present

- Engineered end-to-end data pipelines using Python for data cleaning, analysis, and model deployment
- Developed machine learning models for sentiment analysis, text classification, and trend prediction
- Built a WhatsApp chat analyzer leveraging pandas, nltk, and matplotlib for activity and sentiment visualization
- Delivered actionable insights through data-driven visualizations and predictive analytics solutions

PROJECTS

Movies Recommend System | *Python, NumPy, pandas, Scikit-Learn, Streamlit.*

-  Deployed Link : <https://dpai3jx7az5fqpacdsiuge.streamlit.app/>
-  Github Repo : https://github.com/Shuubhim/Movies_Recommend_System
- Developed a movie recommendation system using collaborative filtering techniques to deliver personalized suggestions based on user preferences.
- Implemented dynamic search functionality and real-time recommendation updates to enhance user engagement.
- Designed and built a user-friendly web interface utilizing Streamlit for seamless user interaction.
- Employed Python, NumPy, pandas, and Scikit-Learn to process data and optimize algorithms for scalability with large datasets.

WhatsApp Chat Analyzer | *Python, Pandas, Matplotlib, Seaborn, WordCloud, Emoji, Urlextract, Streamlit.*

-  Deployed Link : <https://whatsapp-chat-analyzer-shuubhim.streamlit.app/>
-  Github Repo : <https://github.com/Shuubhim/Whatsapp-Chat-Analyzer>
- Developed an interactive tool to analyze WhatsApp chat data, extracting key statistics such as total messages, word count, media sharing, and link usage.
- Designed and implemented visualizations including timelines, word clouds, and activity heatmaps to showcase communication patterns.
- Built an easy-to-use dashboard for real-time data exploration using Python and Streamlit.
- Utilized libraries such as Pandas, Matplotlib, Seaborn, WordCloud, Emoji, and Urlextract to process and visualize chat data.
- Enabled users to gain actionable insights into messaging behavior for personal analytics and group dynamics analysis.
